ABSTRACT

The present invention relates to an interlabial pad individual wrapping container of such a structure as facilitates surely and sanitarily fixing and unfixing an interlabial pad between labia, and an interlabial pad individual wrapping body, and provides the interlabial individual wrapping container which can be used as a preferred handling member at the time of fixing or unfixing the interlabial pad.

Two fingers of the left hand are inserted in the finger insertion openings (13A, 13B) formed from the belt body 12 attached on the wrapping container; the wrapping container (1) is separated into the sections (1A) and (1B) along the separation part (15) by opening these fingers to the left and right; and in this state as it is, the action for fixing the interlabial pad (2) held on a finger of the right hand is performed.
